1. On page 6, the following code is presented on the top of the page
   ```matlab
   subplot(224);  % right, lower corner of 2x2 plot
   stem(f,fftshift(yp));
   title('magnitude');
   ```
The last line should be `title('phase');`

2. On page 7, the graph is updated to reflect the addition of the line `axis([-10 10 -4 4]);`

3. On page 7, the line “Ignore any divide by 0 warnings that may pop up” is added. This is in reference to running `fft_example` for a cosine.
